Mini Project 1: MCQ Quiz System using Python

---

1. Project Title

MCQ Quiz System using Python

---

2. Problem Statement

To design and implement a Multiple Choice Question (MCQ) quiz system using Python that allows users to answer questions, evaluates their responses, and displays the final score.

---

3. Objective

- To develop an interactive quiz application
- To use lists and loops effectively
- To apply conditional statements
- To calculate and display the user's score
- To improve understanding of Python basics

---

4. Tools Used

- Python 3
- VS Code / IDLE

---

5. Description

This project is a simple MCQ-based quiz system developed using Python. The quiz contains multiple questions with four options each. The user selects an answer for every question. The program checks whether the answer is correct, updates the score accordingly, and finally displays the total score after completing the quiz.

---

6. Algorithm

1. Start the program
2. Store questions, options, and correct answers in a list
3. Initialize score to zero

4. Display each question one by one
5. Accept user input
6. Compare user input with the correct answer
7. Increase score if the answer is correct
8. Repeat until all questions are completed
9. Display final score
10. Stop the program

---

7. Program (Python Code)

```
quiz = [
   ["What is 2 + 2?", "a) 3  b) 4  c) 5  d) 6", "b"],
   ["Which language is used to create websites?", "a) Python  b) C  c) HTML  d) Java", "c"],
   ["What does CPU stand for?", "a) Central Process Unit  b) Central Processing Unit  c) Computer Personal Unit  d) Central Program Unit", "b"],
   ["Which symbol is used for comments in Python?", "a) //  b) <!-- -->  c) #  d) **", "c"],
   ["Which keyword is used to define a function in Python?", "a) function  b) def  c) fun  d) define", "b"]
]

score = 0

print("MCQ Quiz\n")

for i in range(len(quiz)):
print(i + 1, quiz[i][0])
print(quiz[i][1])

   answer = input("Your answer: ").lower()
```

```
    if answer == quiz[i][2]:
score += 1
print("Correct!\n")     else:
        print("Wrong!\n")

print("Quiz Completed") print("Your
Score:", score, "/", len(quiz))
```

---

8. Sample Output

```
1 What is 2 + 2?
a) 3  b) 4  c) 5  d) 6
Your answer: b
Correct!

2 Which language is used to create websites?
a) Python  b) C  c) HTML  d) Java
Your answer: c
Correct!

3 What does CPU stand for?
a) Central Process Unit  b) Central Processing Unit  c) Computer Personal Unit  d) Central Program Unit
Your answer: b
Correct!

4 Which symbol is used for comments in Python?
a) //  b) <!-- -->  c) #  d) **
Your answer: c
Correct!

5 Which keyword is used to define a function in Python?
a) function  b) def  c) fun  d) define
Your answer: b
Correct!

Quiz Completed
Your Score: 5 / 5
```

---

9. Result

The MCQ Quiz System successfully displays questions, validates user answers, calculates the score, and shows the final result accurately.
